BARCO

Nazwa **LDX-55 55" full HD LED backlit LCD display**

Cena **0,00 zł**

Producent **Barco**

OPIS PRODUKTU

Barco's LDX-55 display with LED backlights has been designed for use in a wide variety of professional applications. The LDX-55 produces crisp, bright and color-accurate images on a 55" screen size. Featuring LED backlit LCD technology, the LDX-55 boasts a high brightness and durable LED backlight technology and provides an exceptionally thin and space-saving design. Available in native full high definition (1920 x 1080 pixels), the LDX-55 is a high-quality display for long-term usage.

Barco's LDX-55 combines the typical benefits of liquid crystal technology (such as low maintenance costs) with energy-efficient LED backlights, reducing image burn-in and colorations.

Wide viewing angle

The wide viewing angle (178°) and large surface are very beneficial in collaborative environments where detailed information is viewed by multiple participants.

Space-saving design

The LDX-55 is based on Edge LED technology, meaning that the LEDs are positioned around the outer rim of the screen. This technology provides the LDX-55 with an exceptionally thin and space-saving design. The display has been designed for easy installation of high-quality standalone applications or as a complementary visualization solution in modern control rooms.

High resolution

Barco's high-resolution LDX-55 shows large amounts of data in accurate and high-quality images. Any input source can be shown pixel-on-pixel, which avoids unnecessary scaling artifacts often found on lower resolution displays. Combined with the displays' non-glossy professional LCD panel and Anti-Image Retention functionality, the LDX-55 delivers bright and crisp images that do full justice to high-resolution graphics and video.

Features

High brightness

High contrast

Wide viewing angle

High resolution and pixel density

Frame lock

Low power consumption

Long lifetime

Easy installation

Space-saving design

Eco-friendly
