OPIS PRODUKTU

In mission-critical applications, clearly arranged and concise display of all relevant data is key for safe air traffic management (ATM). For minimizing the controllers' workload, data have to be presented very efficiently.

OPScenter™ Display offers integrated and ready-to-use visualization components that comprise

Multi layered display of information

Raw video support (radar scan conversion)

Multi-format map presentation

3D Open GL extensibility

Electronic Flight Strips

OPScenter™ Display allows to seamlessly integrate additional information like NOTAM, METAR and TAF. It provides toolbars, context sensitive menu bars and all the features that can be expected from a modern graphical user interface system.

Display developers will benefit from the ready-to-use basic display system and the wide range of standardized tools for further customisation.
