OPIS PRODUKTU

LDT371V

Engineered for rapid video and data response, the LDT371V WXGA LCD Monitor is optimised for display video or messaging content.

With a 1366 x 768 native resolution you can effectively display eye-catching video and data images in digital signage, retail, education, and corporate applications. A built-in scheduling utility allows you to set the On/Off times for the display, as well as automating the On/Off times for input signals. This high contrast display incorporates motion shift and S-Gamma control to cut image persistence and image retention (burn-in) over extended use. For retail locations, corporate board rooms, classrooms, or kiosks, you'll find the features and performance you need in the LDT371V monitor.

Key Features:

Rapid 6 ms Response Time – Enjoy clear, fast moving pictures free of "ghosting".

Screen Saving Function – Four separate options (Gamma, Cooling Fan, Brightness and Motion) provide increased protection against image retention and image persistence.

Power Save - Detects when an input signal is no longer active and will automatically switch the monitor to a Power Save state to help prolong the life of the LCD panel.

High Contrast Ratio (1200:1) - For incredible visual detail, in both data and video display.

Scheduling - Display during the hours you want, with flexible control over the various inputs.

Tile Matrix - Create data/video walls with multiple LCD displays easily thanks to the simple OSD setup options.

Picture-in-Picture - Display two active inputs simultaneously (PC Mode only).

Panel Lock Out - Prevent unauthorised tampering of panel controls.

VESA Compliant - Allows for use with VESA standard mounting arms or brackets.

Optional speakers available

Two year limited onsite warranty
