Nazwa

Wyświetlacz LED (zewnętrzny) Mitsubishi  
LED Display (outdoor) AVL-ODT20

Cena

0,00 zł

Producent

Mitsubishi

## OPIS PRODUKTU

For fixed outdoor applications, the Mitsubishi's Diamond Vision ODT20 LED screen offers outstanding image clarity and uniformity, whether displaying video, graphics or text.

For outdoor installations where a larger screen size is required, the ODT20 is a first-rate choice. The screen has a 6.000 cd/m<sup>2</sup> brightness which is sufficient for most outdoor applications in full, direct sunlight. Together with a 20 mm pixel pitch, Mitsubishi's unique black package gives the ODT20 an outstanding contrast level, showing deep black and brilliant colours as a result. The ODT20 offers excellent viewing angles both horizontally and vertically, and colour integrity is maintained throughout the viewing cone - an essential factor for commercial and sports applications.

With Mitsubishi's own 3in1 pixel design, the minimum viewing distance is remarkably short.

Mitsubishi's exclusive electrical and mechanical design represents a large step forward in outdoor LED screen performance, as our unique technologies deliver persistent uniformity, seamless images and supreme reliability. The construction is robust, yet lightweight and aesthetically pleasing, so integrating ODT20 into any environment should be very straightforward. Service access for maintenance is available from the front and the rear, giving you more flexibility to choose your screen location and enclosure design. The ODT20 is an ideal choice for many outdoor applications where quality cannot be sacrificed.
